SYLLABUS

B. Tech. Seventh Semester- Computer Science & Engineering (Big Data Analytics (BDA))

Subject Code CS102701	Cryptography & Network Security	L = 2	T = 1	P = 0	Credits = 3
Evaluation Scheme	ESE	CT	TA	Total	ESE Duration
	100	20	30	150	3 Hours

Course Objectives	Course Outcomes
The objective of the course to: <ol style="list-style-type: none"> To understand the principles and practices of cryptography and network security To understand the practical applications that have been implemented and are in use to provide network Security 	Students will be able to: <p>CO1 Understand the Conventional encryption algorithms for confidentiality and their design principles</p> <p>CO2 Understand the Public key encryption algorithms and their design principles</p> <p>CO3 Understand the Use of message authentication codes, hash functions, digital signature and public key certificates</p> <p>CO4 Understand the Network security tools and applications</p> <p>CO5 Understand the System-level security issues like threat of and countermeasures for intruders and viruses, and the use of firewalls and trusted systems.</p>
UNIT 1 Overview: Security trends, The OSI Security Architecture, Security Attacks, Security Services, Security Mechanisms, A Model for Network Security. Symmetric (Private Key) Ciphers: Classical Encryption Techniques: Symmetric Cipher Model, Substitution Techniques, Transposition Techniques, Rotor Machines, Steganography. Block Ciphers and the Data Encryption Standard: Block Cipher Principles, The Data Encryption Standard (DES), The Strength of DES, Differential and Linear Cryptanalysis, Block Cipher Design Principles.	CO1 7 Hrs
UNIT 2 Symmetric Ciphers (continued): Basic Concepts in Number Theory and Finite Fields: Groups, Rings, and Fields, Modular Arithmetic, the Euclidian algorithm, Finite Fields of the Form $GF(p)$, Polynomial Arithmetic, Finite Fields of the Form $GF(2^n)$. Advanced Encryption Standard: The Origins AES, Evaluation criteria for AES, the AES Cipher. Stream cipher: Stream ciphers and RC4. Confidentiality using symmetric encryption: Placement of encryption function, traffic confidentiality, key distribution.	CO2 8 Hrs
UNIT 3 Asymmetric (Public Key) Ciphers: Introduction to Number Theory: Prime Numbers, Fermat's and Euler's Theorems, Testing for Primality, The Chinese Remainder Theorem, Discrete Logarithms. Public-Key Cryptography and RSA: Principles of Public-Key Cryptosystems. Key Management-Other Public-Key Cryptosystems: Key management, Diffie-Hellman Key Exchange, Elliptic Curve Arithmetic, Elliptic Curve Cryptography.	CO3 7 Hrs

SYLLABUS

B. Tech. Seventh Semester- Computer Science & Engineering (Big Data Analytics (BDA))

UNIT 4 Asymmetric Ciphers (continued): Message Authentication and Hash functions: Message authentication requirements, authentication functions, Message authentication codes, Hash functions, Security of Hash functions and MAC, SHA, HMAC, CMAC. Digital Signatures and Authentication protocols: Digital signature, Authentication protocols, Digital signature standards.	CO4 7 Hrs
UNIT 5 Network Security applications: Authentication applications: Kerberos, X.509 Authentication services, public key infrastructure. Electronic mail security: PGP, S/MIME. Overview of IP Security. Web Security: Web security considerations, SSL and TLS, Secure electronic transaction. System Security: Intruders, Intrusion detection, password management, viruses and related threats, virus counter measures, Firewall design principles, and trusted systems.	CO5 7Hrs

SYLLABUS

B. Tech. Seventh Semester- Computer Science & Engineering (Big Data Analytics (BDA))

Subject Code CS111702	Data Analytics Using R Programming	L = 2	T = 1	P = 0	Credits = 3
Evaluation Scheme	ESE	CT	TA	Total	ESE Duration
	100	20	30	150	3 Hours

Course Objectives	Course Outcomes
The objective of the course to: <ol style="list-style-type: none"> 1. Learn Fundamentals of R. 2. Covers how to use different functions in R, how to read data into R, accessing R packages, writing R functions, debugging, and organizing data using R functions. 3. Cover the Basics of statistical data analysis with examples. 4. The whole syllabus will give an idea to collect, compile and visualize data using statistical functions. 	Students will be able to: <p>CO1 Understand the basics of Fundamentals of R.</p> <p>CO2 Understands the loading, retrieval techniques of data.</p> <p>CO3 Understand how data is analyzed and visualized using statistic functions.</p> <p>CO4 Understand the R – programming functions and data frames for data analysis.</p> <p>CO5 Understand the descriptive statistics methods.</p>
UNIT 1 Introduction to R: What is R? – Why R? – Advantages of R over Other Programming Languages - R Studio: R command Prompt, R script file, comments – Handling Packages in R: Installing a R Package, Few commands to get started: installed.packages(), packageDescription(), help(), find.package(), library() - Input and Output – Entering Data from keyboard – Printing fewer digits or more digits – Special Values functions : NA, Inf and –inf.	CO1 7 Hrs
UNIT 2 R Data Types: Vectors, Lists, Matrices, Arrays, Factors, Data Frame – R - Variables: Variable assignment, Data types of Variable, Finding Variable ls(), Deleting Variables - R Operators: Arithmetic Operators, Relational Operators, Logical Operator, Assignment Operators, Miscellaneous Operators - R Decision Making: if statement, if – else statement, if – else if statement, switch statement – R Loops: repeat loop, while loop, for loop - Loop control statement: break statement, next statement.	CO2 7 Hrs
UNIT 3 R-Function: function definition, Built in functions: mean(), paste(), sum(), min(), max(), seq(), user-defined function, calling a function, calling a function without an argument, calling a function with argument values - R-Strings – Manipulating Text in Data: substr(), strsplit(), paste(), grep(), toupper(), tolower() - R Vectors – Sequence vector, rep function, vector access, vector names, vector math, vector recycling, vector element sorting - R List - Creating a List, List Tags and Values, Add/Delete Element to or from a List, Size of List, Merging Lists, Converting List to Vector - R Matrices – Accessing Elements of a Matrix, Matrix Computations: Addition, subtraction, Multiplication and Division- R Arrays: Naming Columns and Rows, Accessing Array Elements, Manipulating Array Elements, Calculation Across Array	CO3 8Hrs

SYLLABUS

B. Tech. Seventh Semester- Computer Science & Engineering (Big Data Analytics (BDA))

Elements - R Factors –creating factors, generating factor levels gl().	
UNIT 4 Data Frames: Create Data Frame, Data Frame Access, Understanding Data in Data Frames: dim(), nrow(), ncol(), str(), Summary(), names(), head(), tail(), edit() functions - Extract Data from Data Frame, Expand Data Frame: Add Column, Add Row - Joining columns and rows in a Data frame rbind() and cbind() – Merging Data frames merge() – Melting and Casting data melt(), cast(). Loading and handling Data in R: Getting and Setting the Working Directory – getwd(), setwd(), dir() - R-CSV Files - Input as a CSV file, Reading a CSV File, Analyzing the CSV File: summary(), min(), max(), range(), mean(), median(), apply() - Writing into a CSV File – R -Excel File – Reading the Excel file.	CO4 7Hrs
UNIT 5 Descriptive Statistics: Data Range, Frequencies, Mode, Mean and Median: Mean Applying Trim Option, Applying NA Option, Median - Mode - Standard Deviation – Correlation - Spotting Problems in Data with Visualization: visually Checking Distributions for a single Variable - R –Pie Charts: Pie Chart title and Colors – Slice Percentages and Chart Legend, 3D Pie Chart – R Histograms – Density Plot - R – Bar Charts: Bar Chart Labels, Title and Colors.	CO5 7Hrs

SYLLABUS

B. Tech. Seventh Semester- Computer Science & Engineering (Big Data Analytics (BDA))

Subject Code CS111703	Data Warehousing and Data Mining	L = 3	T = 0	P = 0	Credits = 3
Evaluation Scheme	ESE	CT	TA	Total	ESE Duration
	100	20	30	150	3 Hours

Course Objectives	Course Outcomes
<p>The objective of the course to:</p> <ol style="list-style-type: none">1. To understand the basics of data warehousing and its components.2. To introduce the concept of data mining and its functionalities..3. To learn about association analysis and its techniques.4. To explore classification and prediction techniques in data mining.5. To understand the concept of clustering and its methods.	<p>Students will be able to:</p> <p>CO1: Gain knowledge of the data warehousing concept, its schemas (data warehouse architecture, and back-end tools and utilities.</p> <p>CO2: Understand the definition and purpose of data mining, types of databases, and data preprocessing techniques</p> <p>CO3: Understand the problem definition of association analysis, frequent item set generation and evaluation of association patterns.</p> <p>CO4: Students will gain the ability to apply classification techniques, evaluate classifier accuracy, and make informed predictions based on data patterns.</p> <p>CO5: Students will acquire the skills to utilize various clustering methods and employ data mining techniques to analyze complex types of data.</p>
UNIT 1: Introduction to Data warehouse, Differences between OLAP and OLTP, A Multi-dimensional data model- Star, Snow flake and Fact constellation schemas, Measures, Concept hierarchy, OLAP Operations in the Multidimensional Data Model, Data warehouse architecture- A three tier Data warehouse architecture, Data warehouse Back-End Tools and Utilities, Metadata Repository, types of OLAP servers, Data warehouse Implementation, Data Warehouse models- Enterprise warehouse, Data warehouse implementation.	CO 1 8 Hrs
UNIT 2: Data mining: Introduction, what is Data Mining, Definition, Knowledge Discovery in Data (KDD), Kinds of data bases, Data mining functionalities, Classification of data mining systems, Data mining task primitives, Data Preprocessing: Data cleaning, Data integration and transformation, Data reduction, Data discretization and Concept hierarchy. Subject Code CS111791	R- Programming Lab	L=0	T=0	P = 2	Credits = 1
Evaluation Scheme	ESE		TA	Total	ESE Duration
	25		25	50	3 Hours

Course Objectives	Course Outcomes
Course Objectives: <ul style="list-style-type: none">Demonstrate use of basic functionsCreate their own customized functionsConstruct tables and figures for descriptive statisticsLearn to understand new data sets and functions by yourselfWork on built-in real-time cases for analysis and visualization	Students will be able to: CO1: Enable to build programming logic and thereby developing skills in programming CO2: Clear understanding on how to organize data analyse data using real time example. CO3: Understanding the I/O interface programming CO4: Study and Analyzes Data Visualizations. CO5: Implement any application-level simulation using R.

List of Experiments12 Hours

- Write a program to check whether a year(integer)entered by the user is a leap year or not?
- Write an R program to find the sum of natural without formula using the if-else statement and while loop.
- Write a program that prints the grades of the students according to the marks obtained. The grading of the marks should be as follows. Marks Grades 800-1000 A+, 700 – 800 A, 500 – 700 B+, 400-500 B, 150 – 400 C, Less than 150 D.
- Write an R program to make a simple calculator that can add, subtract, multiply and divide using switch cases and functions.
- Write a program to perform searching within a list (1 to 50). If the number is found in the list, print that the search is successful otherwise print that the number is not in the list. Program:
- Create a list and data frame that stores the marks of any three subjects for 10 students. Find out the total marks, average, maximum marks and minimum marks of every subject.
- Write the steps to import data from Excel to CSV files and apply data viewer functions like rm(),dim(),head(), tail(), sorting, filtering, searching to view few set of rows.
- Write a program to create two 3 X 3 matrices A and B and perform the following operations:

SYLLABUS

B. Tech. Seventh Semester- Computer Science & Engineering (Big Data Analytics (BDA))

- a. Transpose of the matrix.
 - b. Addition.
 - c. Subtraction
9. Write an R program to create a list containing strings, numbers, vectors and logical values and do the following manipulations over the list:
 - a. Access the first element in the list
 - b. Give the names to the elements in the list
 - c. Add element at some position in the list
 - d. Remove the element
 - e. Print the fourth element
 - f. Update the third element
10. Let us use the built-in dataset air quality which has Daily air quality measurements in New York, May to September 1973. Create a histogram by using appropriate arguments for the following statements:
 - a. Assigning names, using the air quality data set
 - b. Change colours of the Histogram
 - c. Remove Axis and Add Labels to Histogram
 - d. Change Axis limits of a Histogram
 - e. Create a Histogram with density and Add Density curve to the Histogram
11. Design a data frame in R for storing about 20 employee details. Create a CSV file named "input.csv" that defines all the required information about the employee such as id, name, salary, start_date, dept. Import into R and do the following analysis.
 - a. Find the total number rows & columns
 - b. Find the maximum salary
 - c. Retrieve the details of the employee with maximum salary
 - d. Retrieve all the employees working in the IT Department
 - e. Retrieve the employees in the IT Department whose salary is greater than 20000 and write these details into another file "output.csv".
12. Create a dataset or table ["Smart Phone"] in an excel sheet that stores the mobile information [price, company name, model, Sale Percent] of five different companies. Store at least 20 rows. Write the scripts and find out the output for the following information.
 - a. Maximum price of the mobile of each company
 - b. Minimum price of mobile of each company
 - c. Average price of mobile of each company
 - d. Total Price of mobile of each company

	25		25	50	3 Hours

Course Objectives	Course Outcomes
The objective of the course to: 3. Data mining is primarily used by the companies with a strong consumer focus. It enables these companies to determine the factors such as price, product positioning, or staff skills, and economic indicators, competition, and customer demographics	Students will be able to: CO1 Provide efficient distribution of information and easy access to data CO2 Create user friendly reporting environment. CO3 Find the unseen pattern in large volume of historical data that helps to manage an organization efficiently. CO4 Understand the concepts of various data mining Techniques. CO5 Understand the concepts of Preprocessing.

List of Experiments 12 Hours

1. Exploring Weka mining tool.
2. To study the file formats for the data mining.
3. Demonstration of preprocessing on dataset.
4. To convert ARFF (Attribute-Relation File Format) into text file and vice Versa.
5. To apply the concept of Linear Regression for training the given dataset.
6. Demonstration of Association rule process on dataset using apriori algorithm.
7. Demonstration of classification rule process on dataset using j48 algorithm.
8. Demonstration of classification rule process on dataset using id3 algorithm.
9. Demonstration of classification rule process on dataset using naïve bayes algorithm.
10. Demonstration of clustering rule process on dataset using simple k-means algorithm.

		July 2023	1.00	Applicable for AY 2023-24 Onwards
Chairman (AC)	Chairman (BoS)	Date of release	Version	

Shri Shankaracharya Technical Campus, Bhilai

(An Autonomous Institute Affiliated to CSVTU Bhilai)

SYLLABUS

B. Tech. Seventh Semester- Computer Science & Engineering (Big Data Analytics (BDA))

Subject Code CS102793	Capstone Project Phase I	L=0	T=0	P = 4	Credits = 2
Evaluation Scheme	ESE		TA	Total	ESE Duration
	50		50	100	3 Hours

Guideline for Allocation of project 24 Hours

1. Information regarding broad area must be made available to the students well in advance (may be during previous semester).
2. Information must cover following parameters. I. Broad area: Subject or expertise/application area. II. Required skills: Knowledge of subject(s), software, tools & other characteristics. III. Type of project: Hardware, software, design, survey, study based etc. IV. Guide available: Name of Guide (S) from Department & Institute. V. Other related information depending upon specific branch & institute.
3. It is also recommended to give proper counseling to pick up suitable project.
4. Students must get chance to select projects as per their choice or decided mutually between students and department faculty (HoD) concern.
5. One project group must contain maximum four students, however students can do project individually but it should be approved by department.
6. Compiled list of projects must be submitted to the University within 25 days of start of semester.
7. Compiled list may contain following parameters.

Monitoring of project:

1. It is recommended to give projects as per the specializations of existing faculty of the department instead of outside person/agency.
2. Project must be allocated, developed and monitored by department / institution itself, but not by outside agencies.
3. Regular review by guide is recommended to ensure development & contribution of students. Internal

Evaluation & Submission of project:

1. Evaluation of project would be as per the examination scheme of the University, which is based on internal as well as external evaluation.
2. Internal assessment requires submission of project report for getting approved by the concern authority. However printing and binding would be as per the conventional format.
3. Evaluation will be based on live demonstration / presentation and Viva.
4. Final submission of project is expected as, Submission of a copy to the University, • One copy to the Institution central library, • One copy to the department. •

External Evaluation:

		July 2023	1.00	Applicable for AY 2023-24 Onwards

SYLLABUS

B. Tech. Seventh Semester- Computer Science & Engineering (Big Data Analytics (BDA))

UNIT 2: Object oriented databases: Overview of Object-Oriented concepts, Object identity, Object structure, and type constructors, Encapsulation of operations, Methods, and Persistence, Type hierarchies and Inheritance, Type extents and queries, Complex objects; Database schema design for OODBMS; OQL, Persistent programming languages; OODBMS architecture and storage issues; Transactions and Concurrency control, Example of ODBMS.	CO 2 8 Hrs
UNIT 3: Object relational and extended relational databases: Database design for an ORDBMS - Nested relations and collections; Storage and access methods, Query processing and Optimization; An overview of SQL3, Implementation issues for extended type; Systems comparison of RDBMS, OODBMS, ORDBMS	CO 3 7 Hrs
UNIT 4: Parallel and distributed database and Client server architecture: Architectures for parallel databases, Parallel query evaluation; Parallelizing individual operations, Sorting, Joins; Distributed database concepts, Data fragmentation, Replication, and allocation techniques for distributed database design; Query processing in distributed databases; Concurrency control and Recovery in distributed databases. An overview of Client-Server architecture.	CO 4 7 Hrs
UNIT 5: Databases on the web and semi structured data: Web interfaces to the Web, Overview of XML; Structure of XML data, Document schema, Querying XML data; Storage of XML data, XML applications; The semi structured data model, Implementation issues, Indexes for text data. Enhanced Data Models for Advanced Applications: Active database concepts. Temporal database concepts. Spatial databases, Concepts and architecture; Deductive databases and Query processing; Mobile databases, Geographic information systems.	CO 5 7 Hrs

Subject Code CS114724	AI in Gaming	L = 3	T = 0	P = 0	Credits = 3
Examination Scheme	ESE	CT	TA	Total	ESE Duration
	100	20	30	150	3 Hours

Course Objectives	Course Outcomes
The students should be able to understand and use AI techniques for generating efficient, intelligent behaviour in games. Additional attention is to be given to AI algorithms for improving game play experience.	After completion of course, students would be able to: CO1 Understand identify tasks that can be tackled using AI techniques. CO2 Apply appropriate AI technique for the problem under investigation. CO3 Create efficient and robust AI algorithms for game tasks. CO4 Apply learning mechanisms to gaming problems. CO5 Apply AI algorithms for improving game play experience.
Unit 1: Introduction Introduction to Game AI, kind of AI used in game development, model of game AI, AI engine structure. Unit 2: Movement Algorithms and Steering Behavior kinematic movement algorithms, problems related to the steering behaviour of objects and Solutions. Coordinated Movement and Motor Control This unit discusses the concepts related to coordinated movements and motor control. Unit 3: Pathfinding Basic Path finding Algorithms in game development, Path finding for complex solutions Unit 4:
